SOFTWARE REQUIREMENTS SPECIFICATION

College Admission Management Website

1. Introduction

The College Admission Management Website is a simple web-based application developed to provide information about college admissions and make the admission process easier for prospective students. The website provides information about courses, eligibility requirements, the admission process, and an application form.

The website is designed using HTML and CSS. It provides a simple and user-friendly interface through which students can learn about available courses and submit basic details through a sample admission application form.

2. Objectives

The main objective of the College Admission Management Website is to provide clear and useful information about the college admission process.

- To provide information about the college and courses offered.
- To explain eligibility requirements for different courses.
- To describe the steps involved in the admission process.
- To help students understand the basic application procedure.
- To provide a simple online admission application form.
- To create a user-friendly and attractive webpage.

3. Scope

The College Admission Management Website provides students with useful information about college admissions. It contains sections describing the college, courses offered, eligibility requirements, admission procedure, and application details.

Students can enter their name, email address, phone number, date of birth, selected course, gender, and address through the application form.

This project is a front-end demonstration developed using HTML and CSS. The application form does not store or send the information entered by the user.

4. Functional Requirements

The website should provide the following functions:

- Display information about the college.

- Display the courses offered by the college.
- Display eligibility requirements.
- Display the steps in the admission process.
- Provide navigation links to different sections.
- Provide an online admission application form.
- Accept the student's personal and contact details.
- Allow the student to select a course and other required options.

5. Non-Functional Requirements

The website should be simple, attractive, and easy to use. Information should be clearly displayed and the webpage should load properly in a standard web browser.

The website should have readable text, proper spacing, clear navigation, and a consistent design. The webpage should also be responsive so that it can be viewed on different screen sizes.

6. Hardware Requirements

The following hardware is required to develop and view the website:

- Computer or laptop
- Keyboard
- Mouse
- Display monitor
- Internet connection

7. Software Requirements

The following software and technologies are required:

- Windows/Linux operating system
- Visual Studio Code
- Google Chrome or another web browser
- HTML
- CSS

8. User Interface Requirements

The website consists of a header, navigation bar, college information section, courses section, eligibility section, admission process section, application form, and footer. The header displays the website title and a short message. The navigation bar provides links to different sections of the webpage. The application section contains input fields for student information.

CSS is used to provide colours, spacing, borders, alignment, buttons, and overall styling to the webpage.

9. Limitations

The College Admission Management Website is only a front-end demonstration. The application form does not actually save or submit the information entered by the student. A

real admission management system would require server-side programming, a database, authentication, secure data handling, and integration with the college admission system.

10. Conclusion

The College Admission Management Website demonstrates the basic use of HTML and CSS to develop an informative and user-friendly webpage. The website provides information about courses, eligibility, and the admission process.

It also includes a simple admission application form. This project demonstrates fundamental webpage development concepts such as headings, paragraphs, links, lists, forms, input fields, navigation, sections, and CSS styling.
